CODES TO BE USED IN AIRCRAFT MOVEMENT AND DIVERSION MESSAGES

RECOMMENDED that, Members shall:

Use the following codes to express the reason for delay, diversion or other irregularities in aircraft MVT/DIV and other messages. The standardisation of codes used for this purpose is essential for commonality in EDP systems, uniform agency handling, exchange of information, statistical comparison and management analysis.

Two-digit codes (numeric) are primary, as shown below.

Members using alpha codes, when acting as handling agents for members using numeric codes, shall provide for the transmission of numeric codes, either manually or automatically.

A description of a code may cover several possible statements. Where there is still some doubt of interpretation, use the SI to amplify.

It is essential that these codes be applied impartially and not be considered as reasons for blame but rather to identify corrective action.
